Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: The examiner informed Ms. McMillian that Claims 14-21 previous indicated as allowable are not allowable because they read on prior art not cited by Examiner Sorbello. Ms. McMillian requested that copies of the prior art be sent by FAX so that she could consult with Applicant.

(A fuller description, if necessary, and a copy of the amendments which the examiner agreed would render the claims allowable, if available, must be attached. Also, where no copy of the amendments that would render the claims allowable is available, a summary thereof must be attached.)

Ms. McMillian;

I'm including the prior art references and a very brief discussion of how the claims read on the prior art. Please feel free to call me to discuss these issues. I need to act on this case early next week. The method claims 1-11 are allowable over the prior art. However, I would suggest an added limitation to Claim 1. Examiner Sorbello added the limitation "when compared to said amino acid without said mutation". It should read "when compared to wild-type amino acid".

The prior art includes:

Brennan (U.S. Patent No. 5,474,796, Example 4, Columns 9-10) discloses an oligonucleotide and an array comprising probes complementary to a portion of SEQ ID NO: 1 except for one nucleotide difference (Claims 14-17, 20 & 21) because they disclose oligonucleotides and array comprising all possible 10-mers.

Lawrence et al (American Journal of Human Genetics, 63 (supplement): A185, October 1998, Abstract 1053) discloses the oligonucleotide of Claim 16 and provide the motivation to design primers as recited in Claim 18.

Adams et al disclose the oligonucleotides of Claims 14, 15 and 21 provide the motivation to design primers as recited in Claim 19.

Ulrich et al (U.S. Patent No. 5,851,999) disclose the oligonucleotides of Claims 14 and 17.

Claims 14-21 are very broadly drawn to oligonucleotides "comprising" 6-50 nucleotides having a sequence identical or complementary to a portion of SEQ ID NO: 1 except for one nucleotide. The complete set of 10-mers on an array of Brennan encompasses all possible sequences of 10 nucleotides and therefore encompasses the claimed oligos and arrays.

The other references cited above disclose the claimed regions recited in Claims 15-17 and 21 and provide adequate motivation to design primers as claimed in Claims 18 and 19.
